Key GO terms with and without X−linked genes
neuron differentiation
lipid biosynthetic process
glycosylation
cellular lipid metabolic process
cell adhesion
canonical Wnt signaling pathway
anatomical structure morphogenesis
ED
neuron differentiation
glycosylation
cellular lipid metabolic process
cell adhesion
anatomical structure morphogenesis
ED (disc−score adjusted)
translation
ribosome biogenesis
protein folding
cellular respiration
cell migration
cell adhesion
EEM
−2
−1
0
1
2
GSEA NES (IVP vs IVV)
all genes
X−linked removed
FDR < 0.05
FALSE
TRUE
